This is the fourth weekly report for the 2011 Flutracking season, therefore only four data points are displayed on the autoreport graphs. Trends in influenza-like illness will be revealed as more weekly data is accumulated. Across Australia, fever and cough was reported by 2.7% of vaccinated participants and 3.7% of unvaccinated participants. Fever, cough and absence from normal duties was reported by 1.4% of vaccinated participants and 1.8% of unvaccinated participants.

For participants this week, 6729/10439 (64.5%) have received the seasonal vaccine so far. Of the 2407 participants who identified as working face-to-face with patients, 1910 (79.4%) have received the vaccine.
