Weekly Interim Report New Zealand

Week ending 21 April 2019

Low levels of influenza-like illness activity

(Current low numbers of participants in NZ could prevent Flutracking from providing a representative picture in NZ. Care should be taken when interpreting this report)

This survey was sent on Monday, 22 April 2019 at 03:01 a.m. and by 09:00 a.m., Wednesday 24 April we had received 3295 responses (3541 last week) from 1834 people responding for themselves and 1461 household members across New Zealand.

Respondent Numbers by Jurisdiction

State	Respondents	Percentage
North Island	2499	75.8%
South Island	796	24.2%
New Zealand	3295	100.0%

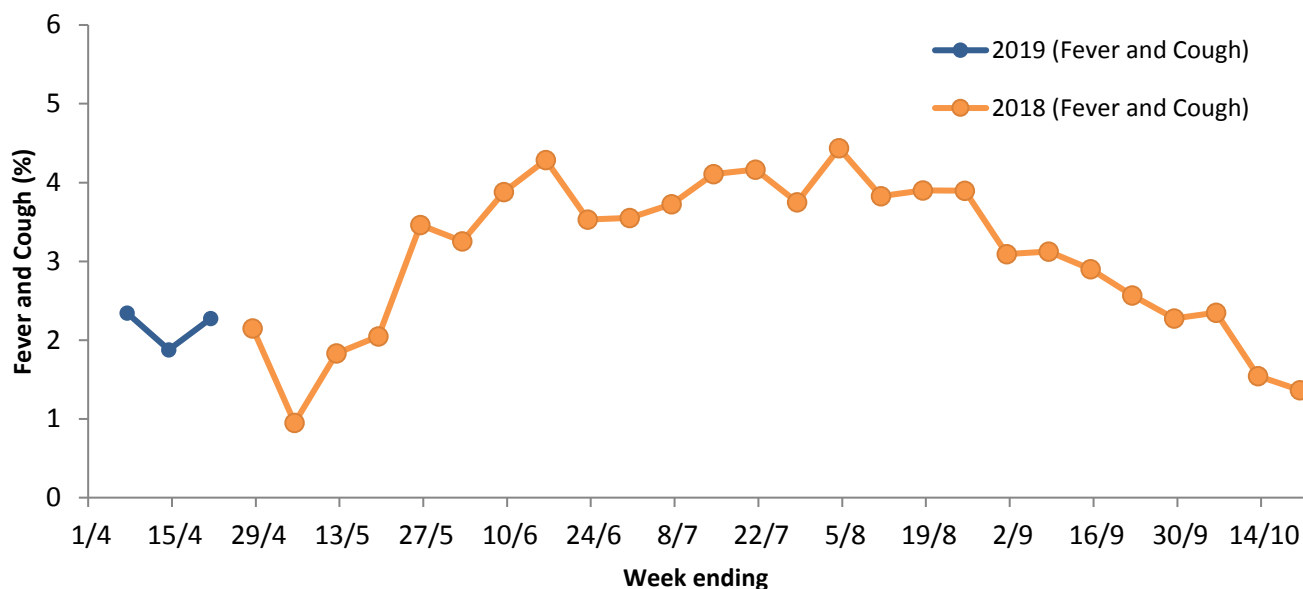

The data presented here should not be treated as authoritative and should always be interpreted together with other trusted sources from the

[New Zealand Influenza Intelligence Report](#)

Across New Zealand, fever and cough was reported by 2.4% of vaccinated participants and 2.3% of unvaccinated participants. Fever, cough and absence from normal duties was reported by 0.9% of vaccinated participants and 1.4% of unvaccinated participants.

For participants this week, 1129/3295 (34.3 %) have received the seasonal vaccine so far. Of the 422 participants who identified as working face-to-face with patients, 231 (54.7%) have received the vaccine.
