

FluTracking

Weekly Interim Report New Zealand

Week ending 14 July 2019

Moderate levels of influenza-like illness activity

(Current low numbers of participants in NZ could prevent Flutracking from providing a representative picture in NZ. Care should be taken when interpreting this report)

This survey was sent on Monday, 15 July 2019 at 03:01 a.m. and by 09:00 a.m., Thursday 18 July we had received 4320 responses (4523 last week) from 2424 people responding for themselves and 1896 household members across New Zealand.

Respondent Numbers by Jurisdiction

State	Respondents	Percentage
North Island	3240	75.0%
South Island	1080	25.0%
New Zealand	4320	100.0%

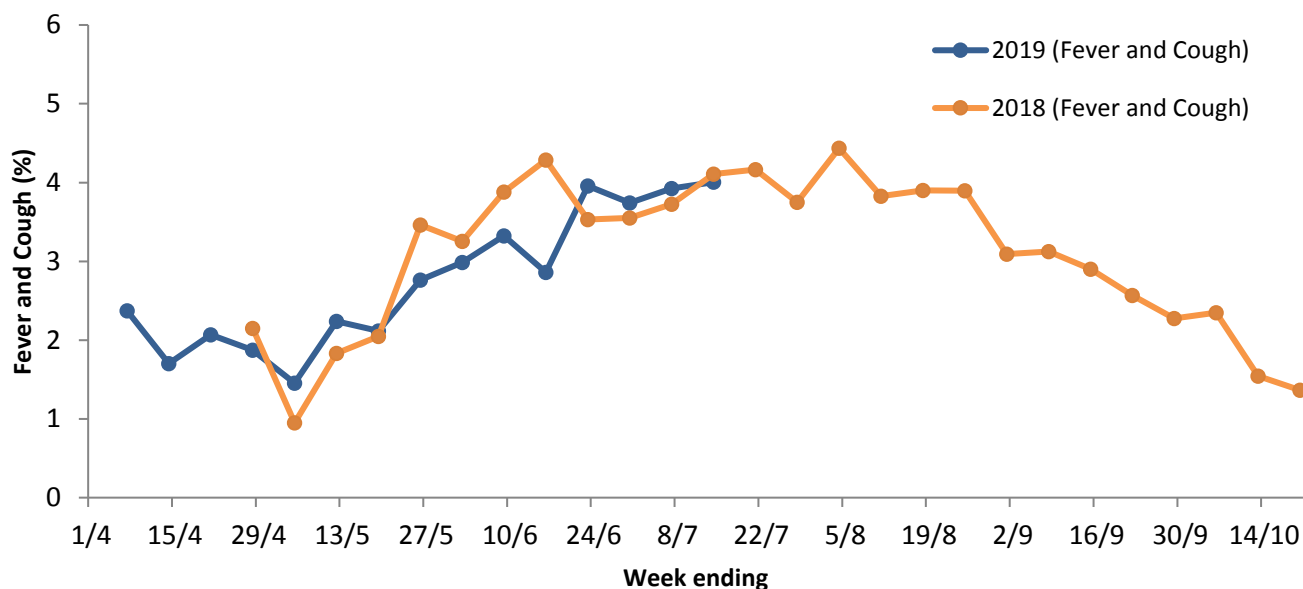

The data presented here should not be treated as authoritative and should always be interpreted together with other trusted sources from the

[New Zealand Influenza Intelligence Report](#)

Across New Zealand, fever and cough was reported by 3.3% of vaccinated participants and 5.5% of unvaccinated participants. Fever, cough and absence from normal duties was reported by 2.8% of vaccinated participants and 4.6% of unvaccinated participants.

For participants this week, 2902/4320 (67.2 %) have received the seasonal vaccine so far. Of the 581 participants who identified as working face-to-face with patients, 509 (87.6%) have received the vaccine.
